
Requests/Reporting

Interfering Substances

The most common interfering substances are listed on the specimen requirement column of the test listing. A more comprehensive listing is available in *Young DS: Effects of Drugs on Clinical Laboratory Tests*. Fourth edition. Washington DC, AACC Press, 1995.

Reference Values

All reference values listed are for adult normals unless otherwise indicated.

Reportable Disease

MCHS-Mankato endeavors to comply with reporting requirements for the state health department regarding reportable diseases. We strive to cooperate with our clients so that we both comply with state regulations. If you need further information, please do not hesitate to contact us.

Reporting

If the referring facility is not on the MCHS-Cerner computer system, the completed report will be delivered by our courier on the next business day following completion of the test. Reports will also be faxed or called immediately upon completion of the test if requested.

Special Request Forms

Specific test request forms are provided for various tests included in this catalog. Each test listing provides information on which request form to use, what information should be included, and where to obtain the form. Additional clinical information is required on a number of these request forms for diagnostic reasons. Type or clearly print all information, always including the patient's age, date of birth, and sex.
